

UMAN COMPUTER INTERFACE DESIGN

GROUP ASSIGNMENT – PART A

Critical Review of Website User Interface Design

Based on the assignment provided by the Institute of Finance Management, the task requires students to evaluate how different websites support various categories of users such as people with disabilities, youth, young adults, and elderly users.

Website	Disability Features	Youth Features	Young Adult Features	Aging/Elderly Features	Recommendations
IFM Website	The website has readable text and organized menus, but lacks accessibility tools such as screen reader support, voice navigation, and text resizing options.	Attractive colors and simple navigation make it easier for young users to browse academic information.	Provides useful academic services, admission information, and online resources suitable for university students and professionals.	Some pages contain small text and too much information which may be difficult for elderly users.	Add accessibility tools such as dark mode, adjustable font sizes, voice assistance, and better contrast for visually impaired and elderly users.
Ajira Portal	The portal provides structured information but has limited support for disabled users such as keyboard navigation and audio assistance.	Youth can easily access job opportunities and internship information.	Young adults benefit from employment announcements, online applications, and career services.	Elderly users may face difficulties due to crowded pages and technical terminology.	Improve accessibility by simplifying navigation, adding multilingual support, and including accessibility settings for visually impaired users.
HESLB Website	The website includes organized menus and	Youth and students can easily apply for loans and	Young adults benefit from loan management	Elderly guardians or parents may struggle with	Introduce chatbot assistance, larger fonts, simpler instructions, and

	forms, but lacks accessibility features like screen-reader compatibility and high-contrast options.	access educational updates.	systems and repayment information.	understanding some procedures and forms.	accessibility tools for disabled and elderly users.
NIDA Website	The site provides important national ID services but lacks advanced disability support features.	Youth can access identity registration services and updates online.	Young adults benefit from online verification and registration services.	Elderly users may experience challenges due to complex forms and navigation.	Add simplified forms, language translation, screen reader compatibility, and mobile-friendly accessibility improvements.

Conclusion

In conclusion, the reviewed websites provide important online services for different categories of users. However, most of them still need improvements in accessibility and usability, especially for people with disabilities and elderly users. Implementing accessibility features such as screen reader support, adjustable text sizes, voice assistance, and simpler navigation would improve the overall Human Computer Interface design and make the systems more inclusive for all users.
